- Realised ROI

COMPLETE APPLICATION MANAGEMENT

UNDERSTAND YOUR FULL
APPLICATION ESTATE WITH
COMPLETE APPLICATION
MANAGEMENT

Understand and improve your performance

Inevitably, through the activities required to support a business, over time and by attrition portfolios of IT assets bloat; typically due to one or many of the following reasons:

- Evolving business requirements
- Decentralised management
- Required Software Upgrades
- Staff movements or growth through acquisitions

As such all companies perform some form of application management with processes that have typically evolved over time. As a consequence, the often disparate portfolio data is not leveraged as comprehensively as it could be; the key to driving down application cost is organising the data in to a single pane of glass viewable by all stakeholders.

how it WORKS

Understand

Camwood provide Complete Application Management (CAM) through effectively leveraging quantitative data, harvested from the business. Camwood addresses the challenge of building that data through a process of Discovery, using whatever incumbent toolsets and data structures are present; where gaps exist Camwood will recommend the most appropriate process or 3rd Party Tool to fill it.

Achieve

In parallel, but staggered, Camwood's CAM Consultants will assess the collected data using a cloud hosted Rimo3 toolset to both improve the quality of the information and to interpret it to deliver a Managed Service focussing on the following monthly Key Performance Indicators that, drive cost down, avoid future cost, improve user experience and promote agility.

Seamless systems

Leveraging the Decision Matrix above, Camwood will evaluate each application and provide a Forward Path Recommendation for which platform they should Target to best suit the Business requirement.
