

COMPLETE APPLICATION MANAGEMENT

UNDERSTAND YOUR FULL APPLICATION ESTATE WITH COMPLETE APPLICATION MANAGEMENT

TOP BENEFITS OF COMPLETE APPLICATION MANAGEMENT

- ✓ Drive Cost Down
- ✓ Avoid Future Cost Improve
- ✓ User Experience Promote
- ✓ Agility
- ✓ Actioned Cost Saving Realised
- ✓ ROI

Understand and improve your performance

Inevitably, through the activities required to support a business, over time and by attrition portfolios of IT assets bloat; typically due to one or many of the following reasons:

- Evolving business requirements
- Decentralised management
- Required Software Upgrades
- Staff movements or growth through acquisitions

As such all companies perform some form of application management with processes that have typically evolved over time. As a consequence, the often disparate portfolio data is not leveraged as comprehensively as it could be; the key to driving down application cost is organising the data in to a single pane of glass viewable by all stakeholders.

HOW IT WORKS

UNDERSTAND

A quick-start application-compatibility tool that helps you to migrate faster by providing a crystal clear view of your current application estate's readiness and its readiness for Win8.1, App-V and/or 64-bit computing.

ACHIEVE

A detailed RAG (Red, Amber, Green) report indicating the status of each application's compatibility with your target platform, showing which apps need no remediation, which need some remediation and which are not compatible. The report also includes details of any remediation work required.

SEAMLESS SYSTEMS

Leveraging the Decision Matrix above, Camwood will evaluate each application and provide a Forward Path Recommendation for which platform they should Target to best suit the Business requirement.
